Most hospitals allow some form of BYOD (71%) 22% increase YOY

Data security is the #1 reason some hospitals prohibit BYOD

Many clinicians are using personal devices when BYOD is NOT allowed:
- 3 in 5 physicians
- 2 in 5 nurses

Top 3 BYOD challenges:
- 54% Infrastructure
- 52% Data security
- 44% Infrastructure

Less than half (40%) of hospitals use a secure texting solution to protect PHI*

Clinicians are using “several” work-related apps:
- Physicians use 4.1
- Nurses use 3.2

BYOD isn’t for everyone:
- 59% nurses prefer hospital-issued devices
- 38% physicians

BYOD use by role:
- Physicians: 62%
- IT staff: 54%
- Nurse practitioners: 53%
- Administrators: 49%
- Nurses: 43%
- Housekeeping staff: 31%
- Transport staff: 22%

Top BYOD drivers:
- Easier care team communication: 59%
- Cost savings: 54%
- Workflow efficiency/time saving: 50%

FACT #3: Many clinicians are using personal devices when BYOD is NOT allowed:
- 3 in 5 physicians
- 2 in 5 nurses

FACT #5: Less than half (40%) of hospitals use a secure texting solution to protect PHI*

FACT #7: Clinicians are using “several” work-related apps:
- Physicians use 4.1
- Nurses use 3.2

FACT #9: BYOD use by role:
- Physicians: 62%
- IT staff: 54%
- Nurse practitioners: 53%
- Administrators: 49%
- Nurses: 43%
- Housekeeping staff: 31%
- Transport staff: 22%

FACT #10: Top BYOD drivers:
- Easier care team communication: 59%
- Cost savings: 54%
- Workflow efficiency/time saving: 50%
